SUMMARY

Software engineer with 3+ years of production experience building distributed systems, microservices, event-driven architectures, and cloud-native pipelines on AWS across e-commerce, government, and climate-tech domains.

EDUCATION

New York University (M.S. in Computer Science)

Sep 2025 – May 2027

Coursework: *Design and Analysis of Algorithms, HCI, Cloud Computing, Big Data (PySpark/Hadoop)*

Velammal Institute of Technology (Bachelors in Information Technology)

Jun 2018 – May 2022

Coursework: Data Structures & Algorithms, Operating Systems, Database Systems, Software Engineering

EXPERIENCE

Software Engineer – CDW Corporation

Feb 2022 – Oct 2024

- Architected a microservices modernization for 1800-Flowers using Java Spring Boot, decomposing a legacy monolith into 8 independently deployable services; reduced average API response time by 35%.
- Integrated Redis caching on hot-path product catalog queries, cutting database load by 45% and improving P99 latency from 320ms to 90ms.
- Built RESTful APIs and event-driven consumers (AWS SQS, SNS) to handle high-concurrency order and notification workflows, supporting peak loads of 10K+ requests/min.
- Engineered a judiciary e-filing platform for the State of Utah (Spring Boot, PostgreSQL, AWS S3/Lambda), processing 500+ daily case submissions and 10,000+ total filings across 3 courts with end-to-end encryption and audit logging.
- Owned backend services for Bringo, an internal recruitment exam platform (Spring Boot, MySQL, ReactJS), supporting assessment workflows for 800+ candidates.
- Developed and maintained CI/CD pipelines (GitHub Actions) for automated build, test, and deployment across staging and production with zero-downtime deploys.
- Mentored 2 junior engineers through structured onboarding documentation, accelerating ramp-up by 25%.
- Leveraged DynamoDB and MongoDB for high-throughput, schema-flexible data stores in microservice contexts.

Software Engineering Intern – LOCOMeX, NY

May 2026 – July 2026

- Integrated RESTful microservices in Django to power a climate-tech data platform, handling structured ingestion from AWS S3 and serving JSON APIs consumed by React frontends.
- Designed and implemented an automated PDF report pipeline using AWS S3 event triggers and Lambda, reducing manual report generation time by 70%.
- Deployed services in a Linux environment; wrote shell scripts for dev automation and integration testing, reducing environment setup time across the team.

PROJECTS

LLM Sentinel – Real-Time LLM Security Dashboard – [Link](#)

Nov 2025 – Dec 2025

- Engineered a real-time Streamlit security dashboard tracking live inference traffic across 3 defense layers; visualized 805+ requests with an 82.7% block rate and OWASP LLM Top 10 benchmark results showing 92.9% detection across 42 attack payloads.
- Wired AWS CloudWatch metrics and SNS alerting to surface anomalous behavior within 30 seconds; diagnosed and fixed a Base64 encoding bug causing false positives, with protected pipeline latency at 3s vs 15s unprotected baseline.

AI-Powered Dining Concierge Chatbot – [Link](#)

Jan 2026 – Feb 2026

- Designed and deployed a serverless microservices architecture using API Gateway, Lex, Lambda, SQS, OpenSearch, DynamoDB, and SES, indexing 4,975 restaurants across 12 cuisines and 8 NYC neighborhoods; implemented SQS-driven queue worker to decouple processing and automate email delivery.
- Automated infrastructure provisioning using Python (boto3), enabling repeatable deployments; used CloudWatch logs and metrics to validate reliability and resolve workflow bottlenecks.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript/TypeScript, SQL, HTML, CSS, SASS

Frameworks: Spring Boot, Django, ReactJS, REST APIs, Microservices

Cloud & Infra: AWS (Lambda, API Gateway, SQS, DynamoDB, OpenSearch, S3, CloudWatch, SNS, Bedrock), Docker, CI/CD

Databases: DynamoDB, MongoDB, MySQL, PostgreSQL, Redis

Tools: Git, GitHub Actions, Linux, Postman, Figma, Claude Code, Copilot

CERTIFICATIONS

- AWS Certified Developer – Associate
- AWS AI Practitioner
